

Pharmaceutical

Experts in pressure
management solutions for
the Pharmaceutical industry.

About Elfab

Overview

Dedicated to protecting the lives of your people and safeguarding your critical processes and equipment, Elfab is a leading provider of pressure management solutions for the pharmaceutical and biopharmaceutical industries.

Elfab Expertise

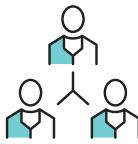

With extensive experience in providing solutions to optimise pharmaceutical manufacturing, we understand the rigorous demands which need to be met to help you achieve and exceed your operational reliability and efficiency goals.

Innovation

Our innovative technologies include state of the art pressure management solutions for a variety of applications and a wide range of process conditions in both pharmaceutical and biopharmaceutical manufacturing.

Partnership Approach

Through our partnership approach we will work with you to introduce solutions to drive efficiencies and reduce cost of ownership, engaging with you at either group or individual plant level, depending on the requirements of your organisation.

Safety First

We understand the paramount importance of preventing catastrophic process failures resulting from an overpressure event which could lead to injury or damage to plant equipment. Our primary focus is to provide you with the highest quality solution and by alleviating potentially dangerous pressure build-up we ensure your processes are safe.

Global Reach

Our specialist global Pharmaceutical Team is supported by two manufacturing facilities, Elfab in North Shields (UK) and Oseco in Broken Arrow (USA), regional sales offices and a network of channel partners dedicated to our Pharmaceutical customers.

Contact Us

To discuss your pressure relief requirements with a member of our Pharmaceutical Team, please contact us:

Pharmaceutical Solutions

Meeting the demanding requirements of the pharmaceutical process environment is vital for your success. Our portfolio offers an ideal solution for the stringent market requirements and is designed to protect a variety of processes and critical equipment such as reactors, pumps, heat exchangers and other processing equipment.

Opti-Gard

Our Opti-Gard rupture disc is a high performance, full metal non-fragmenting reverse acting disc delivering unparalleled fatigue resistance and longevity in the process. It withstands full vacuum without the need of supports. The disc's smooth surface finish helps to prevent a build-up of contaminants, allowing easy cleaning, and is designed to sustain the rigours of Clean-in-Place procedures.

Low Pressure Solutions

Elfab's Opti-Gard SoLo is a low pressure variant of our Opti-Gard and is suitable for use in processes where pressures are as low as 2 psig. The full metal, non-fragmenting design allows customers to protect low pressure applications and prevent contamination caused by alternatives such as graphite or composite designs.

Our ultra-low pressure disc, Milli-Gard, delivers overpressure protection at extremely low pressures down to 0.044 psig.

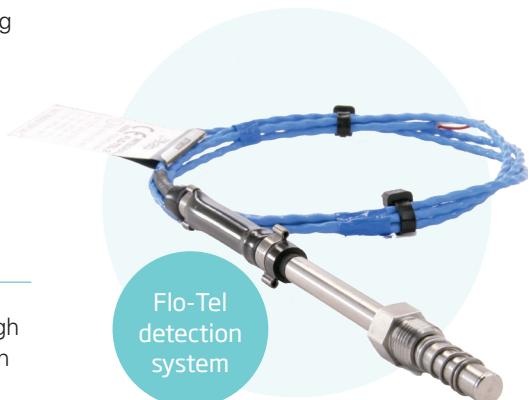

Detection

Our range of rupture discs can be integrated into process control systems through the use of our non-invasive Flo-Tel detection system. Providing a fail-safe solution for identifying when a rupture disc functions, Flo-Tel is a reusable solution. And with no upstream or downstream contact with your product, it is unaffected by downstream pressure fluctuations. This eliminates spurious alarms, minimising the risks of unscheduled process stoppages.

In addition to these products, we also offer pressure relief solutions for specialised process requirements. Please refer to the technical specifications section or contact us for more details.

Biopharmaceutical Solutions

The high risk of contamination in the biopharmaceutical manufacturing process and the operational challenges that this complexity presents drives the need for equipment specifically designed for the unique environment.

Rupture Discs

Our biopharmaceutical pressure relief portfolio includes solutions for the whole spectrum of pressure ranges in bioprocesses. Opti-Gard Ferrule and Opti-Gard Ferrule SoLo have all the benefits of our Opti-Gard Pharmaceutical range and are suitable for use with sanitary (hygienic) fittings.

Detection

Our range of rupture discs can be integrated into process control systems through the use of our non-invasive Flo-Tel detection system. Providing a fail-safe solution for identifying when a rupture disc functions, Flo-Tel is a reusable solution. And with no upstream or downstream contact with your product, it is unaffected by downstream pressure fluctuations. This eliminates spurious alarms, minimising the risks of unscheduled process stoppages.

Our sanitary Flo-Tel detection system is designed for use with sanitary tri-clamps, NA Connect and other sanitary connections.

In addition to these products, we also offer pressure relief solutions for specialised process requirements. Please refer to the technical specifications section or contact us for more details.
